

“LOG IN” page

“HOME” page - first thing they see after opening the app

If a scan has been submitted today already, the “capture today’s scan” will be blurred out. User can only click “log routine”. User can only submit one scan per day

“SCAN” page

User scans

The scanning page disappears, replaced by a “score report” page. Criteria include redness, blemish, hydration, color. Below the score report, include a small line graph that shows the score trend up until today.

The app should remember every scan captured. Store every scan in a database. There should only be one scan per day.

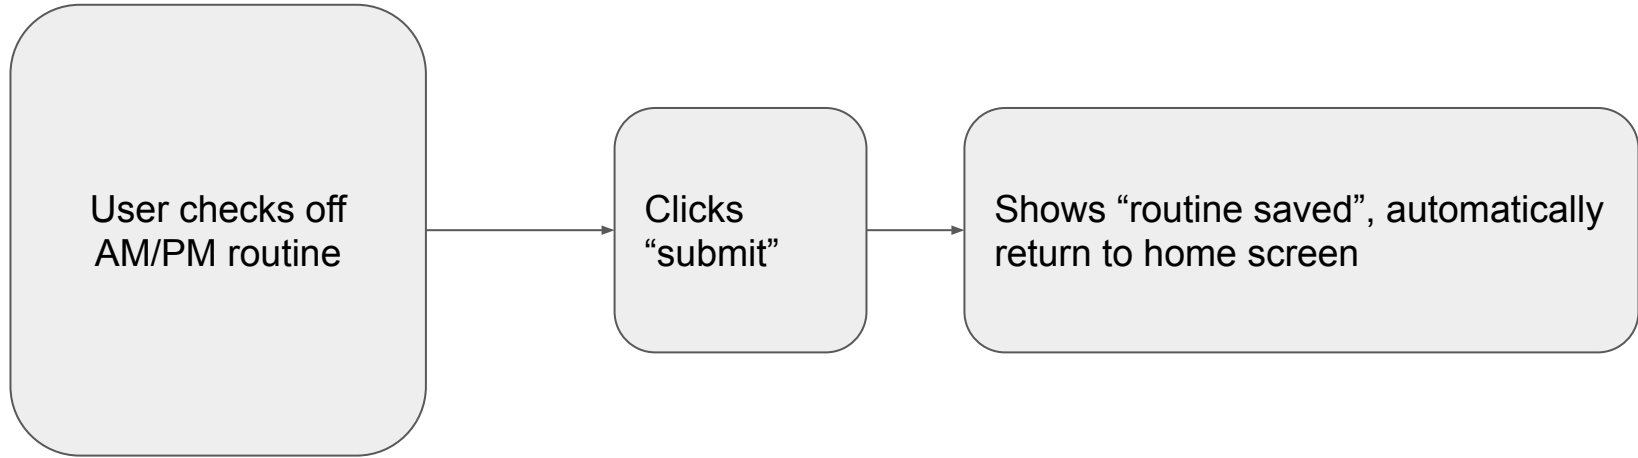

If user doesn't like the scan, he can press “retake” button at the bottom

Screen changes back to scanning function

If user likes the scan, he can click “finalize”

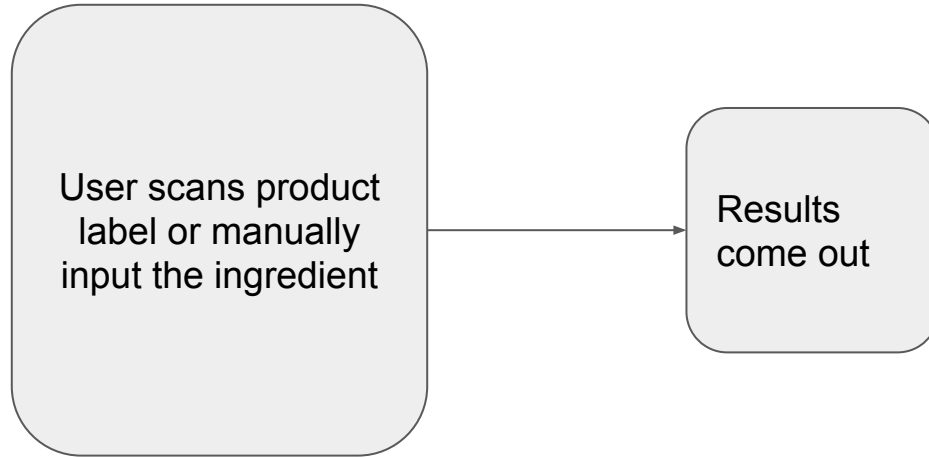

Back to “HOME” screen. Show the decrease/increase of score since last scan. If it is increase, use green font and show “+ __”; if decrease, use grey font and show “- __”.

“ROUTINE” page

User CANNOT go back and check/uncheck routine after hitting submit.

“INGREDIENTS” page

“PROGRESS” page
